American Academy of Orthopaedic Surgeons (AAOS), Les Hawthorne : Patient Assessment Practice Scenarios before purchasing it in order to gauge whether or not it would be worth my time, and all praised Patient Assessment Practice Scenarios:

3 of 3 people found the following review helpful. Not up to date By Millard Blanchard Copyright date was 2011 but content is dated prior to 2010. This book will NOT be useful for students as it contains outdated NREMT protocols. The content script and NREMT skills sheets are based on the old EMT-B and EMT-I's which were changed in 2010 and are now no longer taught. It may be useful for an instructor to extract the proctor dialogue, scenarios, MOI's, etc. for use in creating different scenarios based on the current order of assessment in the NREMT skill sheets. However that small bit of potential usefulness is not worth the \$60. I work as an EMS instructor at our local tech school. 2 of 2 people found the following review helpful. Unhappy! I can't see half of the pages! By beth The book is good for practicing running through all sorts of assessments. What really aggravates me is that half of the book the pages are

readable, the other half you can't see because the type is too light to read. This book is too expensive to have cheap copy quality. Content is useful but I can't read half of it! I'm not happy...called publisher Jones And Bartlett publishers and asked about poor quality and was told to call company I ordered it from. She just made some excuse about how it is printed by demand (actually copied). Poor poor quality

By NickNack

I am in charge of training at my job and I was making up patient scenarios from scratch. Its not bad but you run out of ideas really quickly. This book has everything needed from what the Proctor says and what the students response should be. 150 trauma and medical scenarios already made. I am glad that I made this purchase.

Patient assessment may be the most challenging subject for EMS students to grasp, and there never seems to be enough time in the classroom for practice. Patient Assessment Practice Scenarios allows students to fine-tune their understanding of the patient assessment process. This BLS- and ALS-level text includes 150 EMS practice scenarios (75 trauma and 75 medical) that focus on the assessment process as dictated by the National Registry medical assessment and trauma assessment skill sheets. Each case is a script of an emergency call. The student and proctor (who may or may not be an instructor) may read through the case for rote practice of the assessment process, or the student may verbally work through the assessment process, with cues from the book read by the proctor. Cases may also be used as homework, in the classroom, or for self-study! This book is for BLS or ALS students who want to successfully learn patient assessment inside and out before actually working in the field, and any EMS provider who wants to refresh his or her assessment skills.
