**Jean L. Blosser, Roberta DePompei : Pediatric Traumatic Brain Injury: Proactive Intervention (Neurogenic Communication Disorders)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Pediatric Traumatic Brain Injury: Proactive Intervention (Neurogenic Communication Disorders):

0 of 0 people found the following review helpful. Five StarsBy CustomerI received my book as it was described and

earlier than what I expected. Thank you! 0 of 0 people found the following review helpful. Outstanding resource for adult and pediatric TBI  
By Marjorie A. Graham  
This book provides an excellent description of the underlying disorder and a practical, team-based approach. I would recommend it to both speech-language pathologists in a school and medical setting

The second edition of this popular text will once again address the unique needs of children who have experienced a traumatic brain injury and the role of speech-language pathologists in their recovery of skills. Updated with more resources and additional information on service delivery to the family, not just the child through the stages of recovery. An ideal textbook for child language disorders and TBI courses.

"This second edition was written to provide updated information on ideas, materials, interventions, technologies, and staff involvement in the treatment of children with traumatic brain injuries. It is written for professionals from a variety of disciplines who are challenged daily by children and adolescents with TBI. The book includes information to assist families/friends, medical and educational personnel, and community members. The authors have clearly met their objectives by writing an informative text for managing and remediating pediatric TBI and its effects." --  
Catherine Baer Coleman, Master of Science from George Washington University (Divine)  
About the Author  
Professor, Speech and Hearing Center, University of Akron
