**Thomas Pasko, Bradley Seidman, Scott Birkhead : Physician Characteristics and Distribution in the US, 2001-2002 Edition** before purchasing it in order to gage whether or not it would be worth my time, and all praised Physician Characteristics and Distribution in the US, 2001-2002 Edition:

This work has been thoroughly updated with information on over 797,800 physicians. This comprehensive demographic reference resource is a useful reference for the professional who researches, recruits, represents or markets to physicians. Data is separated into three key sections: trends, characteristics and distribution of physicians. The trends section provides data on major professional activity, specialities, age, gender and population ratios by

nation, state and speciality. The characteristics section presents key professional and individual characteristics of the physician population by age and gender, including country, year and school of graduation, specialities and board certification. The focus of the distribution section is on census summary data by state, age and gender as well as speciality and activity by location, non-federal physicians and medical practice data. Also included are more than 90 summary and detail tables.
