5 of 5 people found the following review helpful. Love themBy InsomniaAwesome, I really wish there were more resources like this to study from! I have been excited to get these, the cards are really nice and would buy again. I hope they make one for the pediatric version. If only there could be similar items for radiology or CT imaging or EKGs only. In the ED time is very limited and these cards will improve my diagnostic skills, saving time (and helping patients too of course).0 of 0 people found the following review helpful.
