before purchasing it in order to gauge whether or not it would be worth my time, and all praised Population Health: Management, Policy, and Technology. First Edition:

0 of 1 people found the following review helpful. so I don't love it. By still waiting New condition. Delivered quickly. Only 4 stars because it's a textbook, so I don't love it. :) 1 of 3 people found the following review helpful. One Star By MBsMom The text is formatted poorly and difficult to read in the Kindle version. 0 of 0 people found the following review helpful. A great new book that addresses the spectrum of key issues ... By Sunil Prasad A great new book that addresses the spectrum of key issues related to helping define and understand population health. If you are a health IT executive or practitioner in the healthcare this book provides tremendous insights along with questions at the end of each chapter that can support work in the field with clients and with students in the classroom. This book is excellent for graduate student courses, public health, and healthcare professionals. The authors are from across the spectrum of academia and industry practitioners which enriches the book giving it real world application. Chapter 13 covered in detail, the big data topic, and provided powerful insights on ways to address volume, variety, and velocity of one of the fastest growing areas- healthcare IT data needs. The final chapter in the book does an excellent job of highlighting critical case studies on the topics of emergency department over utilization, the challenges of asthma for urban youth, emergency department readmissions, and introduces an innovative program called Health Promotion and Prevention Initiative (HAPPI) which involves launching integrated efforts of health record banks and population health organizations to improve community population health. Well worth the money and should be on the desk of many healthcare and public health professionals throughout the industry.

Population Health Management, Policy and Technology, First Edition is a 14 chapter anthology on issues confronting today's public health and medical care stakeholders (i.e., consumers, patients and their families, care providers, clinicians, health care workers, public health workers, community leaders, academics, policy researchers, and technologists) in each community's healthcare and public health network. The transformation of the United States (U.S.) public health and medical care system is being driven by the need for improving quality, access and affordability of services for all patients and consumers in the United States. Topics include: Structured network collaborations- value alliances, Health in All Policies, Accountable care organizations and clinical integration networks, Aging population issues, Chronic disease, Public health system transformation, Social determinants of health, Health promotion, Health information technology and exchange, Health impact assessments, Innovations across the healthcare, health information technology, and public health sectors, and The importance of integrated behavioral health services among other topics. This collaborative first edition work brings together contributions from authors across academia, industry, and government sectors. It offers new insights into these topics and many others for university faculty and students, policy makers, physicians, health technologists, and health care and public health professional alike. Population Health: Management, Policy, and Technology, First Edition, can serve as an expansive classroom textbook as well as a guide for insights, references, and ongoing health and public health policy evolution to spawn awareness, education, creative thinking, and new policy initiatives in the 21st century. Additional contributing authors to this work included: Scott Hedges, MD, Anthony Zipple, Sc.D, MBA, Sandra Wilkiniss, PhD, John P. Reinhart, CPA, MBA, CNA, Kathleen Smith, MBA, MPH, and Stephanie Suzanne Lipow, MLIS.

About the Author EDITORIAL TEAM The book's editorial team and its Foreword author included the following executives: Robert J. Esterhay, MD, is the chair of the Department for Health Management and Systems Sciences in the School of Public Health and Information Sciences at the University of Louisville. LaQuandra S. Nesbitt, MD, MPH, is a board-certified family physician and director of the Louisville Metro Department of Public Health and Wellness in Louisville, Ky. James H. Taylor, DMan, MBA, MHA, served as president of the University of Louisville Hospital from August 1996 through February 2013. He assumed the role of special advisor to the Executive Vice President for Health Affairs at the University of Louisville and as CEO of University Medical Center in March 2013. Joanne Bohn, MBA is a published author, book designer and corresponding editor of books on contemporary healthcare issues, and principal of KMI Communications, LLC. Bohn is also a doctoral candidate in public health at the University of Louisville School of Public Health and Information Sciences (2014) with a concentration in health management and systems sciences. FOREWORD: Dana Alexander, MSN, MBA, RN, FAAN, FHIMSS, is Vice President Practice Leader for Clinical Transformation for Divurgent, LLC. Actively engaged in government and industry initiatives and serving as the 2015 HIMSS North American Board of Directors Chair. With 27 contributing authors (including the executive editors) to the 14 chapter anthology, a full set of biographies is included in Appendix B of the book.
