From Springer : Practical Approach to Peripheral Arterial Chronic Total Occlusions before purchasing it in order to gauge whether or not it would be worth my time, and all praised Practical Approach to Peripheral Arterial Chronic Total Occlusions:

A practical, highly illustrative and easy to read reference for interventional cardiologists, vascular surgeons, cardiac/endovascular catheterization laboratory personnel, interventional radiologists, technical staff, industry

professionals, investigators, and researchers on peripheral arterial CTO interventions. Peripheral CTO lesions are present in nearly 50% of all peripheral arterial disease (PAD) endovascular interventions. There is tremendous growth in the performance and learning of peripheral arterial CTO procedures. There are several ongoing physician courses and many others that are being prepared; however, there is a significant lack of standardized selection, strategies, techniques and equipment necessary to achieve a high degree of reproducible success with low complication rates during the performance of these complex and technically challenging endovascular procedures.

This book seeks to help those involved in endovascular management of patients with chronic total occlusions to develop a systematic approach to the treatment of these occlusions. The book is aimed at practitioners (vascular, cardiology, interventional radiology) who perform peripheral endovascular interventions. It is designed to instruct those who are just starting to learn endovascular skills as well as to increase the awareness of available options for those who have performed hundreds of interventions. (Michael C. Soult, Doodys Book s, June, 2017)From the Back CoverA practical, highly illustrative and easy to read reference for interventional cardiologists, vascular surgeons, cardiac/endovascular catheterization laboratory personnel, interventional radiologists, technical staff, industry professionals, investigators, and researchers on peripheral arterial CTO interventions.Peripheral CTO lesions are present in nearly 50% of all peripheral arterial disease (PAD) endovascular interventions.
