Jeannette Hoit, Gary Weismer : Preclinical Speech Science Workbook before purchasing it in order to gauge whether or not it would be worth my time, and all praised Preclinical Speech Science Workbook:

The Preclinical Speech Science Workbook is a natural companion to the Preclinical Speech Science textbook, designed to help students integrate, apply, and go beyond the material presented in the textbook. The workbook contains a variety of activities, including anatomical labeling, measurement of physiologic and acoustic data, interpretation of graphs, and the conduct of simple experiments (without the need for special equipment). Additionally, this companion text contains modified versions of artwork from the textbook, as well as new artwork created by Maury Aaseng. Instructors will find that the activities in Preclinical Speech Science Workbook will help students begin to make the transition from passive learners to active participants in their development toward becoming speech-

language pathologists.
