**Food and Agriculture Organization of the United Nations : Risk Assessment of Choleraogenic *Vibrio Cholerae* 10 and 0139 in Warm-Water Shrimp and International Trade: Interpretative Summary and Technical Report (Microbiological Risk Assessment Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Risk Assessment of Choleraogenic *Vibrio Cholerae* 10 and 0139 in Warm-Water Shrimp and International Trade: Interpretative Summary and Technical Report (Microbiological Risk Assessment Series):

Choleraogenic *Vibrio cholerae* 01 and 0139 are the causative agent of cholera, a water-and-food-borne disease with epidemic and pandemic potential. This report focuses on the risk of acquiring cholera from warm-water shrimps in international trade. Shrimp is a very important export product from many developing countries but outbreaks of

cholera in these countries can have devastating effects on the international markets for their food products. This volume looks at different approaches for assigning the risk associated with cholera in warm-water shrimp in international trade. Qualitative and quantitative approaches to assessing risk were developed and compared and risk estimates were made using the available and relevant data.
