Carl Mottram BA RRT RPFT FAARC : Ruppel's Manual of Pulmonary Function Testing - Elsevier eBook on Intel Education Study (Retail Access Card), 10e (Pageburst (Access Codes)) before purchasing it in order to gage whether or not it would be worth my time, and all praised Ruppel's Manual of Pulmonary Function Testing - Elsevier

The perfect text, on-the-job reference and certification exam review, **MANUAL OF PULMONARY FUNCTION TESTING**, 9th Edition includes a wealth of information on pulmonary function tests, techniques, pathophysiology, equipment, computers, and quality assurance to help you get the best results every time. Detailed information on the pulmonary function tests used to determine the presence, extent, and progression of lung disease and abnormality helps you reveal conditions including asthma, chronic bronchitis, emphysema, and cystic fibrosis. This new edition includes even more opportunities to apply your knowledge with additional Case Studies and Self-Assessment Questions. Case studies provide problem-solving challenges for common clinical cases, including each case history, PFT testing results, a technologists comments, and questions and answers. PFT Tips boxes highlight and reinforce the most important Pulmonary Function Testing information in every chapter. Entry- and Advanced-Level objectives follow the content guidelines suggested by the CPFT and RPFT exam matrices from the National Board for Respiratory Care (NBRC). Concise chapter outlines introduce the topics to be covered. Key terms are listed at the beginning of each chapter, bolded in the text, and defined in an expanded glossary. New Bronchoprovocation chapter features important information on methacholine, histamine, mannitol, exercise challenges, and eucapnic voluntary hyperventilation. New chapter on reference equations simplifies common reference equations and includes normal and abnormal values encountered in the clinical setting. New How To boxes provide step-by-step guidelines to performing pulmonary function tests, taking the guesswork out of completing accurate and result-producing tests. New NBRC-CPFT mapping prepares you for the certified pulmonary function technologist credentialing examination, correlating content to test items in the NBRC-CPFT testing matrix. New Clinical Scenario lecture slides provide in-depth case analysis with figures, charts, lab values, and documented research. New author Carl Mottram, a leading respiratory care expert who contributed to this books previous two editions, is the Technical Director of the Pulmonary Function Labs and Rehabilitation at the Mayo Clinic and is an Associate Professor of Medicine at the Mayo Clinic College of Medicine and a highly sought-after lecturer at national and international symposiums and conferences.
