training as a medical transcriptionist. This book was listed as one of the references that can be used. As an RN, I am already familiar with a lot of the common daily prescribed medications but there are a lot in certain specialties that I do not know. This is a tremendous help for both spelling and usage which aids in determining if I have the correct drug. I really like it. 0 of 0 people found the following review helpful. Best tool on the shelf of every medical transcriptionist. By N. Nick The best book out there for medical transcriptionists. I have an older one at the doctor's office and this one at my home office. Very valuable as a tool. I use this in addition to the internet for those hard-to-spell medications. Highly recommend. 0 of 0 people found the following review helpful. Four Stars By Kindle Customer An ok book for drug references.

Written by transcriptionists for transcriptionists, Saunders Pharmaceutical Word Book 2012 makes it easy to look up more than 28,000 brand-name and generic drugs. It lets you quickly locate the drug details you need, such as a correct spelling and capitalization, corresponding uses, cross references of brand names to generics, and the usual methods of administration (e.g., capsule, IV, cream). This edition also contains the latest information on new FDA-approved drugs, drugs in the approval process, and new herbal/natural remedies. Over 28,000 brand-name and generic drugs are profiled, including in vitro testing kits, radiographic contrast and other imaging agents, and wound dressings. Sound-alike references help you avoid confusing drugs that have similar-sounding names. Appendices offer useful information at a glance, including the most prescribed drugs, a list of sound-alikes, therapeutic drug levels, and abbreviations used with medications and dosages. Information written by and for medical transcriptionists eliminates unneeded information to save you time in correctly determining the drug being transcribed and confirming related information. Updated drug information ensures that all data is current and accurate, with new drugs added, obsolete drugs removed, and appropriate changes made.
