Jeffrey M. Smith : Seeds of Deception GMO Trilogy (Book DVD Bundle) before purchasing it in order to gage whether or not it would be worth my time, and all praised Seeds of Deception GMO Trilogy (Book DVD Bundle):

3 of 3 people found the following review helpful. Everyone needs to know these thingsBy Pat H.Too bad most of the public is so uninformed about the agribusiness industry and lobby. Keep up the good work Jeffrey M. Smith3 of 3 people found the following review helpful. A great reality check.By kpowers40Should be required reading for all grocery managers and farmers. I bought 4 copies and passed them out to friends.3 of 3 people found the following review helpful. An absolute necessity for your DVD collection.By Edith SeamanWe need to know what is happening

to our food supply. Everyone should watch this DVD. Even ranchers and anti-vegetarians need this information.

Now Jeffrey M. Smith's best-selling book is paired with a new DVD and CD set that shows how genetically modified organisms (GMOs) put our health and environment at risk. This set will impact consumer perceptions and buying habits. DVD 1: Unnatural Selection This stunning, award-winning documentary by Bertram Verhaag and Gabriele Krber reveals harsh consequences of genetic engineering on three continents. Vandana Shiva, Andrew Kimbrell, Percy Schmeiser and others, describe uncontrollable, self-replicating GM contamination, failed crops, farmer suicides, and new GM animals that threaten natural populations. "Best Film," (CineEco, Portugal), "Best Long Production," (IEFF, Brazil), and "Best Journalistic Achievement," (IEFF, Germany). "Meticulously researched, excellently photographed" - komedia DVD 2: Hidden Dangers in Kids' Meals: Genetically Engineered Foods Shocking research results, inadequate regulations and warnings from eminent scientists explain why GM foods are dangerous and should be removed from kids' meals. The dramatic story of how student behavior in a Wisconsin school was transformed with a healthy diet provides added motivation to make a change. It features Jeffrey Smith and more than a dozen scientists and experts. Audio CD: You're Eating WHAT? Jeffrey Smith's riveting one-hour talk. Seeds of Deception This is the top-rated, best selling book in the world on GM foods. Smith exposes the serious health dangers of genetically modified foods and the corporate cover-up. A fast-paced thriller of industry manipulation and political collusion, combined with lucid descriptions of genetic engineering and guidance on how to protect yourself and your family.

Publishers Weekly-Recent news headlines have focused on the disagreement between the U.S. and Europe over genetically modified foods: the U.S. exports them, but the European Union doesn't want to import them, believing their safety remains unproven. Are genetically modified foods safe? Longtime anti-GM foods campaigner Smith presents the "opposing" case. He offers cases where GM produced results that were at best unexpected (increased starch content in potatoes), at worst grotesque (pigs without genitals). He describes how one corporation reportedly tried to bribe Canadian government scientists into approving genetically engineered bovine growth hormones they deemed unsafe; how some scientists have reported their careers were threatened as a result of their refusal to approve certain GM products in the U.S.; and how "conflicts of interest, sloppy science, and industry influence" can distort the approval process. The cases Smith presents are scary and timely, but he explores only one side of the story. Readers looking for a balance consideration of genetically modified foods will want to look elsewhere. Copyright 2003 Reed Business Information, Inc. About the Author International bestselling author of Seeds of Deception and Genetic Roulette, Jeffrey M. Smith is a widely popular spokesperson on the documented health risks of genetically modified organisms (GMOs) and how biotech companies rig research, gag critics, hijack regulators, and spin fantastic unfulfilled promises. His Institute for Responsible Technology's Campaign for Healthier Eating in America is designed to achieve the tipping point of consumer rejection of GMOs to force them out of the food supply. The campaign encourages public and private showings of the Monsanto film and offers support material at www.ResponsibleTechnology.org. He lives in Fairfield, Iowa.
