American Academy of Orthopaedic Surgeons (AAOS), Mike Helbeck, John M. Jerin : Sick/Not Sick: A Guide To Rapid Patient Assessment (EMS Continuing Education) before purchasing it in order to gage whether or not it would be worth my time, and all praised Sick/Not Sick: A Guide To Rapid Patient Assessment (EMS Continuing Education):

The concepts of 'Sick-Not Sick' are applicable to BLS, ALS and even hospital/clinic based providers. That being said my only criticism of this text is that fairly quickly into the text it becomes clear that the target audience of the author is first responders and BLS providers. The primary survery approach outlined in this book is an excellent approach for providers of all levels, EMT's, Medics, Nurses, etc. anyone that works in prehospital, urgent or emergent care would benefit from this book. My suggestion

for future editions would be to make some minor language changes to make this book more universal for providers of all levels. 1 of 1 people found the following review helpful. Should be a ppt lecture. By Patrick J. Content could be covered just as well with a 60min PowerPoint presentation. Good for the EMT student. Spend an afternoon with it if there's a bargain used copy; run through it once and you'll likely never use it again. If your rapid assessment skills are decent and you know when to call for ALS, you don't need this. 0 of 0 people found the following review helpful. I don't know if my expectations were too high or ... By Reynol Vela I don't know if my expectations were too high or different, but the content did not really address what I was looking for. The book was fairly short of a read, which in hindsight is probably because this is a guide to RAPID patient assessment. Guess it's meant to supplement your foundational textbooks. Read other reviews to see if this is actually what you are looking for; it was not for me.

Completely updated with new case studies throughout, *Sick/Not Sick, Second Edition* is designed to help EMS personnel develop rapid patient assessment skills. This resource distills years of field experience into a workable formula that both inexperienced and experienced providers can use. *Sick/Not Sick* teaches EMS personnel how to quickly collect information and discern what details are important in order to provide immediate initial care. After all, in EMS it comes down to whether the patient is SICK or NOT SICK.
