The International Agency for Research on Cancer : Some Thyrotropic Agents (IARC Monographs on the Evaluation of the Carcinogenic Risks to Humans) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Some Thyrotropic Agents (IARC Monographs on the Evaluation of the Carcinogenic Risks to Humans):

This volume evaluates carcinogenicity to humans of 19 chemicals that are carcinogenic to the thyroid follicular-cell epithelium in rodents. These included some so-called "anti-thyroid" drugs (methimazole, methylthiouracil, propylthiouracil and thiouracil); some sedatives (doxylamine succinate and phenobarbital); and some other drugs including the systemic antifungal antibiotic griseofulvin, the diuretic spironolactone, and the antibacterial sulfa drugs sulfamethazine and sulfamethoxazole. Other chemicals are or have been used in agriculture as pesticides (amitrole, chlordane/heptachlor, hexachlorobenzene and toxaphene), in foods and cosmetics (kojic acid), in hair dyes (2,4-diaminoanisole) or as industrial chemicals (N,N'-diethylthiourea, ethylenethiourea and thiourea).

About the AuthorThe International Agency for Research on Cancer (IARC) is part of the World Health Organization. IARC's mission is to coordinate and conduct research on the causes of human cancer, the mechanisms of carcinogenesis, and to develop scientific strategies for cancer control. The Agency is involved in both epidemiological and laboratory research and disseminates scientific information through publications, meetings, courses, and fellowships.
