American Academy of Orthopaedic Surgeons (AAOS), Clay Richmond, Doug Poore : Special Events Medical Services before purchasing it in order to gage whether or not it would be worth my time, and all praised Special Events Medical Services:

0 of 0 people found the following review helpful. Highly recommended to all Special Events ManagersBy Dan CormanyI teach special events management, and this book does a far better job of addressing its particular specialty area (that of EMS for special events) than do most other special events books in handling their respective areas. The book comes with an online learning component (for which you must have an individual code to access) and this component is superb, too. It may be the finest online instruction I've ever seen. While I'm sure this book is handy for EMS providers, it is at least as equally valuable to special events planners, for it is thorough and teaches an element of large event production that is often glossed over in event management text books. I generally am not given to superlative statements, but I believe this should be a necessary manual for all event producers. It provides understanding that all event producers need to have in order to operate a truly responsible event.1 of 1 people found

the following review helpful. Met my expectations By Kurt Dennison I rate this purchase a 5 because the book provides very good information, thoughts and ideas as they relate to special events. Since the Boston Marathon bombing, there has been a heightened sense of security as they pertain to special events, and this book addresses a lot of safety issues. I am a Special Events coordinator for the fire service I work for, and this book will help me with lots of the preparation, thoughts and decisions I make today and in the future.

From staffing to set-up, Special Events Medical Services (SEMS) prepares EMS personnel to properly plan for and manage medical response at any type of special event in their community. This concise, highly interactive continuing education course consists of the SEMS textbook and online course. Since no two special events are alike; SEMS covers the basic principles to apply when planning for and working at any type of special event, including: Preplanning First aid station planning and set-up Communications Safety concerns Mass-casualty considerations Chapters on specific types of events include weather and outdoor events, stadium and mega-events, equestrian events and rodeos, and extreme and combat sports events. The SEMS online course walks students through the process of creating an emergency medical response plan and implementing it during a special event. An access code for the SEMS online course is printed on the inside front cover of this textbook. Providing standby services for special events requires specialized knowledge and skills beyond initial EMS training. With special events medical services training, new and seasoned EMS personnel alike can ensure a timely and appropriate medical response regardless of the special event size or type.
