One of the best book I have readBy Professor Dr JafriI fell in love with the contents of this book,a must for residents and fellows who want to "show off"" correct techniques.A book for the Master of Neurosurgery(Universiti Sains Malaysia) and Master of Neurology(USM)1 of 1

people found the following review helpful. Great little guideBy aristarThis is a great guide of several neurological tests. this book tells and shows you how to administer useful therapeutic assessments.

Ideal for students and clinicians to access quick clinical information, *Special Tests for Neurologic Examination* offers invaluable evaluation and assessment tips and techniques for neurologic conditions commonly found in patients. Organized in an easy-to-use format, this book is the perfect guide for practicing clinical skills and reviewing for licensure and certification examinations. Dr. James R. Scifers describes and illustrates special tests for the upper extremity, lower extremity, and spine. This resource provides performance criteria for each special test, important information on specificity and sensitivity, and valuable references for further investigation. Inside you'll find: Techniques for dermatome, myotome, reflex screening, and concussion testing Examples of various concussion grading scales and neuropsychological tests Special design that facilitates use of the book as a user-friendly study guide and quick clinical reference Data on test specificity and sensitivity to assist clinicians in determining the value and strength of various clinical examination procedures Additional resources for further study and exploration A facilitative and comprehensive approach to learning, practicing, and reviewing neurologic special tests makes *Special Tests for Neurologic Examination* a must-have for students and clinicians alike. With a focus on commonly used evaluative procedures for differentiating and diagnosing neurologic disorders, the book serves as a valuable companion to the popular *Special Tests for Orthopedic Examination*.

By providing students with a clear, concise, and well-illustrated text on neurologic examination techniques, Dr. Scifers has filled an obvious void in the athletic training, physical therapy, and allied health literature. *Special Tests for Neurologic Examination* is much more than a collection of special tests and examination techniques. The descriptions and figures have been carefully selected and the inclusion of alternate (regional) names for selected techniques minimizes the confusion experienced by students who are often required to master a large number of tests. The publication of this text is both timely and appropriate. John M. Hauth, EdD, ATC, East Stroudsburg University of Pennsylvania
