Gary Lawson, Mary Peterson : Speech Audiometry (Core Clinical Concepts in Audi) (Core Clinical Concepts in Audiology) before purchasing it in order to gage whether or not it would be worth my time, and all praised Speech Audiometry (Core Clinical Concepts in Audi) (Core Clinical Concepts in Audiology):

Like other books in the Core Clinical Concepts in Audiology Series, Speech Audiometry is designed to be particularly helpful and appealing to students and clinicians. It provides a single, easy to manage volume that provides broad coverage of speech audiometry and masking in clinical protocols. In addition to providing appropriate background

information, the coverage presents a broad spectrum of assessment tools ranging from traditional to modern. Procedures in this book will assist clinicians in determining differential diagnosis, assessing auditory processing ability, identifying pseudohypacusis, determining cochlear implant candidacy, predicting hearing aid benefit, and counseling.

About the AuthorDr. Lawson is coordinator of the Au.D. program in the Department of Speech Pathology and Audiology at Western Michigan University. Dr. Peterson is an audiologist with 23 years of clinical experience in a variety of clinical settings. She received her master s degree in 1986 and her doctor of audiology degree in 2007. She joined the clinical faculty at Western Michigan University in 2005, where she teaches courses in geriatric and rehabilitative audiology and in cochlear implants in the Doctor of Audiology program.
