The Speech Therapists at the rehab where my mom is (with aphasia from a seizure) were so impressed with this book. Mom has been working with it, and also an app that we were referred to. I would suggest this book to anyone with aphasia who is also doing speech therapy or as a way to keep working between sessions. 0 of 0 people found the following review helpful. I would strongly recommend the book as a way of assisting in the recovery process for anyone who wants to invest themselves at this level.

This workbook is for stroke survivors with aphasia to improve receptive language function. It contains a wide range of exercises appropriate for both individuals with severe deficits as well as those with mild receptive aphasia. The workbook contains: matching exercises, yes/no questions, "wh" questions, 1 step directions, multiple step directions, directions using functional materials and images, exercises targeting comprehension from sentence level up to short stories and functional math problems to improve attention and cognitive processing skills.
