**From Brand: Springer : Sports Medicine and Arthroscopic Surgery of the Foot and Ankle** before purchasing it in order to gage whether or not it would be worth my time, and all praised Sports Medicine and Arthroscopic Surgery of the Foot and Ankle:

Sports Medicine is now a specialty in its own right. The Olympics are coming to the UK which has focused interest in

the field, and pain in elite sport is an unresolved issue. Sports Medicine is an area that has expanded dramatically in the last 5 years, and demand for educational materials to help bridge the gap in the literature are highly sought-after. This book utilises the excellent sports medicine section originally published within *International Advances in Foot and Ankle Surgery* and present it in a quick reference format for residents and trainees in orthopedic sports medicine. The information presented covers current accepted techniques with scientific rationale and will appeal to all surgeons and health care professionals with an interest in sports medicine. This is a truly international, multidisciplinary manual of foot and ankle surgery in sports medicine by the specialty's leaders and most experienced surgeons. Current up to date trends and techniques using a scientific approach including evidence based guidelines where applicable are included. The reader will be exposed to a step-by-step approach to each procedure presented.

From the reviews: "This is a useful entry in the ever-expanding library of foot and ankle books, with a stated focus on sports medicine and arthroscopy. It is intended for a broad audience who may be involved in treating sports patients who may require foot or ankle surgery. Clearly, orthopedists and podiatrists will be the primary audience, but others also may find it useful, including family practitioners with a sports medicine interest, physical therapists and athletic trainers. In a nutshell, this is recommended!" (Martin C. Yorath, *Doody's Service*, September, 2012)

From the Back Cover: *Sports Medicine and Arthroscopic Surgery of the Foot and Ankle* is an invaluable source of information for the sports medicine practitioner who performs foot and ankle surgery. All the common sports injuries of the foot and ankle that may require surgery are covered. The latest techniques, including arthroscopic approaches are highlighted. This unique text is designed to be a reference for all levels who want the best resource for their sports medicine foot and ankle patients who may require surgery.
