Trade Policy, Social Security, Medicare, Obamacare, Education, Child Care, I:

0 of 0 people found the following review helpful. Brief Bio of AuthorBy CommentDr. Stephen Blaha is a well-known Historian of the evolution of Civilizations. In a series of books culminating in *Supercivilizations: Civilizations as Superorganisms* he shows that the 50+ known civilizations of Man have a common evolutionary pattern that can be expressed in mathematical equations. Remarkably these equations also apply to superorganisms such as social insects, and other species. In this book; "Starting a Resurgent America: Solutions: Destabilized America, Economy, Trade Policy, Social Security, Medicare, Obamacare, Education, Child Care, Immigration, Reviving Industry, Crime, Security, Terrorism, Prisons, Poverty, Unemployment, Exporting Technology, Media Excesses, Pollution, Waste Disposal, Space, Research, and Defense;" he describes the issues facing America from the viewpoint of history and the general evolution of civilizations. He offers some detailed solutions to the numerous ills facing America. A must read for those wanting answers to the ill conceived policies that have led America to the edge of bankruptcy and social unrest. Dr. Blaha has served on the faculties of several major universities and has also done pioneering work in Physics, Mathematics, Economics, Philosophy, and Computer Science. In 1981 he originated the concept of a probabilistic Black-Scholes Model while engaged in economic research at Bell Laboratories, Murray Hill. For many years he has been a member of the American Economics Association and of the American Physical Society. 0 of 0 people found the following review helpful. Thought-provokingBy CustomerThis book has you look at many different problem areas that impact today's economic and social problems. The author proposes solutions to these problems. These solutions will definitely give you a non-partisan outlook, which are interesting solutions to difficult problems. The writing still is very compact, each sentence makes its own statement. The sections are short, but contain a lot of information. This is a book that one can sit down and read without having to wade through a ton of fluff. This book will definitely expand your outlook on these problems. I consider it a great read and time well spent.

Recent elections have focused on negatives: how to cut programs and how to raise taxes. This book proposes a positive solutions oriented approach to solve the root causes of the country's economic problems: the milking of America by foreign trade agreements that has brought the country and many of the people to the brink of bankruptcy. It shows the primary cause of our decline is a multi-decade trade imbalance fed by an unfair trade policy of low import duties, and the relatively high level of American workers' wages compared to foreign wages. The granting of "Most Favored Nation" status to China in the early 1990's, together with China's extraordinary low average wages and China's robber baron attempts to capture major industries such as pharmaceuticals, have led to a massive trade imbalance. In this book we propose a solution to the foreign trade problem that will level the playing field for America and foreign countries. In addition we propose specific NEW solutions for the problem areas listed in the title. Dr. Blaha is a historian and economist, as well as a physicist, with a practical approach to the many major problems facing America including a better alternative than Obamacare, a powerful solution for environmental pollution, and a revived space program based on building a new space travel infrastructure. An action oriented approach!
