William Vincent, Joseph Weir : Statistics in Kinesiology-4th Edition before purchasing it in order to gage whether or not it would be worth my time, and all praised Statistics in Kinesiology-4th Edition:

0 of 0 people found the following review helpful. Errors in examples and sample problems, not recommendedBy Nom de BloomThere are errors in the examples (Table 8.1), as well as at least one of the chapter problems, and it is questionable if the calculations for Pearson's r is correct (8.01), as it does not yield the same value as the Machine

Formula. Using their method to calculate r led to my missing three exam questions. These kinds of errors in a fourth edition are inexcusable. 1 of 1 people found the following review helpful. *Statistics in Kinesiology* By John Brenton A very concise, well presented and easy to read book outlining the statistics utilised in this type of research. Thoroughly recommend, particularly for those who struggle with the dry read of stats or for those who are just embarking on this type of research. 0 of 0 people found the following review helpful. Four Stars By Mike Very helpful and easy to follow.

The only statistics text currently available specifically for kinesiology majors, *Statistics in Kinesiology, Fourth Edition*, provides an accessible introduction to statistics concepts and techniques and their applications to kinesiology-related fields. Students will learn to use statistical tools to analyze quantitative data and then apply that knowledge to common questions and problems they will encounter as they continue their studies. The fourth edition has been fully updated with new content that reflects the changing face of the kinesiology discipline, including the following: A new chapter on clinical measures, including information on relative risk, odds ratios, and diagnostic testing, that will be especially pertinent to students in athletic training, physical therapy, and other fields dealing with clinical or rehabilitation populations More detailed coverage of analysis of covariance (ANCOVA), which is becoming the technique of choice for analyzing pretestposttest control group design New material on statistical inference and correlations, including information on hypothesis testing, types of error, confidence intervals, and partial correlations Additional information on the quantification of reliability and its applications in kinesiology *Statistics in Kinesiology, Fourth Edition*, begins with a thorough introduction to basic concepts such as measurement and research; organizing and displaying data; percentiles; mode, median, and mean; and measures of variability. The text then explores more advanced topics, including correlation and regression, t tests, analysis of variance (ANOVA), and analysis of nonparametric data. While the book offers an overview of the most important statistical concepts and techniques, the emphasis remains on those commonly used concepts in kinesiology disciplines, such as repeated measures ANOVA and the interpretation of interactions in factorial ANOVAs. The fourth edition features extensive problem sets that will help students begin to calculate and interpret data. To enhance learning, students are encouraged to practice the calculations manually, but knowledge of advanced mathematics is not required. The examples given involve only basic algebra skills. Information on computer-based application is also provided throughout the book. In becoming familiar with the mathematical formulas used by software programs, students will learn to critically evaluate computer results and interpret data with greater confidence and ease. In updating this text, the authors have been careful to retain the features that have made past editions such a success. Examples drawn from exercise physiology, biomechanics, physical education, and physical therapy help students relate to how the techniques are used and how those techniques allow them to answer questions in their chosen fields. The problem sets are designed to help students interact more fully with the content, thereby aiding in their comprehension of concepts and techniques. Answers for each of the problem sets are located in the back of the text and give students the opportunity to check their work as they progress. Chapter summaries and key words lists identify content that students should carefully review. With *Statistics in Kinesiology, Fourth Edition*, students will gain a solid understanding of the statistical techniques used in physical activity fields. The book's practical approach, based on the authors more than 50 years of combined experience in teaching statistics, will make it easy for students to learn these important, but often intimidating, concepts.

"This is an excellent book for those who desire to know more about the practical aspects of statistics in exercise science and allied health professions. The information is introductory and very practical, which makes the book easy to read and enhances comprehension." -- Doody's Book (4-star review) About the Author William J. Vincent, EdD, is currently an adjunct professor and is the former director of the general education wellness program in the department of exercise sciences at Brigham Young University in Provo, Utah. He is professor emeritus and former chair of the department of kinesiology at California State University at Northridge. He was employed at CSUN for 39 years and taught statistics and measurement theory for 35 of those years. In 1995 he received the University Distinguished Teaching Award. Dr. Vincent has been a member of the American Alliance for Health, Physical Education, Recreation and Dance since 1964. In 2007, he received the AAHPERD National Honor Award for distinguished service to the profession. He has served as the president of the Southwest District of AAHPERD and was a member of the AAHPERD Board of Governors from 1993 to 1995. In 1988 he was named the Southwest District Scholar and delivered the keynote address titled "From Means to Manova" at the 1989 convention. Dr. Vincent is the author or coauthor of 4 books and more than 70 professional articles. Fifty-one of those articles appeared in refereed journals, including *Research Quarterly for Exercise and Sport*, the *International Journal of Sports Medicine*, and the *Journal of Athletic Training*. He has a bachelors degree in physical education (pedagogy), a masters degree in physical education (exercise physiology), and a doctorate in educational psychology (perception and learning), all from the University of California at Los Angeles. Dr. Vincent and his wife, Diana, live in Lindon, Utah, and have 6 children and 20 grandchildren. In his free time, Dr. Vincent enjoys camping, snow skiing and water skiing, conducting genealogical research, and reading. Joseph P. Weir, PhD, is a professor in the doctor of physical therapy program at Des Moines University in Iowa. He earned his doctorate in exercise physiology from the University of Nebraska at Lincoln. Dr.

Weir is a fellow of both the American College of Sports Medicine (ACSM) and the National Strength and Conditioning Association (NSCA). He was given the NSCA Presidents Award in 2007 and its William J. Kraemer Outstanding Sport Scientist Award in 2006. He served as president of the National Strength and Conditioning Association Foundation from 2006 to 2009, and he was cochair of the ACSMs Biostatistics Interest Group from 2001 to 2003. Dr. Weir is the associate editor of the Journal of Strength and Conditioning Research, and he is a member of the editorial board of Medicine and Science in Sports and Exercise. He is the author of numerous research articles, which have appeared in journals including European Journal of Applied Physiology, Physiological Measurement, American Journal of Physiology, and the Journal of Orthopaedic and Sports Physical Therapy. He is coauthor of Physical Fitness Laboratories on a Budget, and he has contributed chapters to seven texts, including NSCAs Essentials of Personal Training. Dr. Weir is originally from Glennallen, Alaska. He and his wife, Loree, live near Des Moines, Iowa, and have three children. Dr. Weir is an avid motorcyclist and fan of University of Nebraska football.
